          p#successMessage.success
```

Output WebPage :

Outcomes:

CO3: Apply JavaScript and JSON for web application development

Conclusion: (Conclusion to be based on the outcomes achieved)

From this experiment, I learned how to use JavaScript for form validation and DOM manipulation in web applications. I applied

different validation techniques to ensure user input is correct and provided real-time feedback for errors. The experiment helped me understand how to dynamically interact with form elements and enhance user experience. By implementing validation checks, styling effects, and event handling, I gained practical knowledge of JavaScript's role in web development.
